DEDICATION

This thesis is dedicated to:

1. My beloved parents, H. Sugianto Imam and Hj. Siti Aminah.
2. My beloved brother, Rizky Dhani Hari
3. My beloved aunt, Juariyah, for her bless and support, and all my relatives
4. My beloved friend; Wahyudi Hernandi
5. All of my friends in 2005 level. Thank you for beautiful moment we have.
6. My Almamater, Jember University
CONSULTANTS’ APROVAL

THE USE OF SKIMMING AND SCANNING TECHNIQUES TO IMPROVE THE READING COMPREHENSION ACHIEVEMENT OF GRADE 8G STUDENTS OF SMP NEGERI 1 AMBULU JEMBER

THESIS

Composed as one of the Requirement to Obtain S1 Degree at the English Education Program of Language and Arts Education Department of Teacher Training and Education of Jember University

Name : Amanda Christina Suprapto
Identification Number : 050210491068
Level : 2005
Department : Language and Art
Program : English Education
Place of Birth : Jember
Date of Birth : Mei 7th, 1986

Approved by

The First Consultant

ACKNOWLEDGEMENT

There is no beautiful word to say except “alhamdullillah” to express my deepest thanks to god the almighty who has been giving me mercies and blessing so that I can finish my thesis entitled “The Use of Skimming and Scanning Techniques to Improve the Reading Comprehension Achievement of Grade 8G Students Of SMP Negeri 01 Ambulu Jember.”

I would like to express my deepest appreciation and sincerest thanks to the following people:

1. The Dean of the Faculty of Teacher Training and Education, Jember University.
2. The Chairperson of the Language and Art Department.
3. The Chairperson of English Education Program
5. The examination committee
7. The Principal, English teacher, Administration staff and 8G students of SMP Negeri 01 Jember in the 2010/2011 Academic Year for the cooperation.

Finally, I have done my best for my thesis. I expect that it will be useful and beneficial for all the readers. Any critics and valuable suggestion would be appreciated.

Jember, January 2011

The Writer

SUMMARY

Amanda Christina Suprapto.2011. The Use Of Skimming and Scanning Techniques to Improve the Reading Comprehension Achievement of Grade 8G Students Of SMP Negeri 01 Ambulu Jember

Thesis, English Education Program, Language and Art Departement, Faculty of Teacher Training and Education, Jember University.

Consultant: 1. Dra. Zakiah Tasnim, MA

Key Words: Reading Comprehension Achievement, Skimming and Scanning Techniques

Based on the result of semi structured interview with the year 8 English teacher of SMP 01 Ambulu Jember, the students of the year 8 especially 8G had difficulty in comprehending text and they were passive in joining the English reading class. It was proved by the fact that 8G had low score in the previous English test which mainly covered by reading. The result showed that their average score was 65. It was still under the school standard score requirement, 70. Considering the problems above, this classroom action research was undertaken collaboratively with the English teacher to overcome the problem by using skimming and scanning techniques. The procedures of the teaching and learning process were as follows: at the first time, the students did the pre-reading. In this activity, the researchers gave them some leading questions, and then introduced the technique of skimming and scanning technique including the definition, the function, what kinds of text will work on, and how the students skim and scan the text. The next step was whilst reading. In this activity, the researchers asked the
students to focus on the questions first to get the key word of the questions. Then, the students decided what techniques that would be suitable for those questions, and finally they skim or scan the text to find the right answers. After answering all the questions, the English teacher and the researcher discussed the correct answer with the students together. At this stage, the teacher monitors the students’ active participation during the teaching and learning process. At last, the students had post reading. In this step, post reading activity was intended to give follow up actifities. The activities included giving further questions, drew the conclusion and evaluated the students’ progress.

Classroom Action Research design was applied in this study. The action research was carried out to improve the students’ reading comprehension achievement by using skimming and scanning techniques at the year 8G of SMP Negeri 01 Ambulu Jember. This classroom action research was done sequencely or step by step, namely planning the action, implementing the action, monitoring (by observation) and evaluation; and analysis and reflection. In the implementation, there were two meetings in cycle one and two meetings in cycle two. The classroom observation used an observation checklist to identify the students’ active participation in joining the reading class activities, while the reading comprehension test used objective test in the form of multiple choice, True/false and short answer. There were two criteria used to evaluate the success of the actions in this research. There were: (1) the actions were considered successful if 75% of the students were active in the teaching and learning process of reading comprehension by using skimming and scanning (2) the action were successful if 75% of the students got at least the score of 70 (≥70).

The Result of the actions in cycle one was unable to reach the research target requirement. Three of students were absent and thirty students were present. There were 20 of 30 students or 66.66% of the students who were active in joining the reading comprehension class by using skimming and scanning in the first meeting of cycle one while in the second meeting of cycle one, all of the students were present. There were 23 of 33 students or 69.69% of the students who were
active in joining the reading comprehension class by using skimming and scanning techniques. In addition, there were only 19 of 33 students or 57.57% of the students could achieve the target score of 70 ($\geq 70$). However, there was an improvement on the students’ active participation in joining the reading comprehension class and reading comprehension achievement by using skimming and scanning in cycle 2. There were 24 of 33 students or 72.72% of the students who were active in joining the reading comprehension class by using skimming and scanning in the first meeting while in the second meeting there were 27 of 33 students or 81.81% of the students who were active in it. Then, the number of students who got at least 70 ($\geq 70$) also increased from 19 of 33 students to 26 of 33 students or from 57.57% to 78.78%. Therefore, the actions were stopped.

Considering the result of the research, it is suggested that the English teacher also uses skimming and scanning techniques as an alternative teaching techniques in teaching reading comprehension because it has been proved that the teaching reading comprehension by using skimming and scanning techniques can improve both students’ active participation in joining the reading comprehension class and students’ reading comprehension achievement. And for the students, they are suggested to use skimming and scanning technique to improve their reading comprehension skill because skimming can help the students to comprehend general information quickly and scanning can help them to comprehend specific information quickly. And in this research result can be valuable information for the future researchers who has the same problem in reading, so they can solve the problem by conducting the research by using skimming and scanning technique.
