Improving Quality of Life: Shifting from Hospital-Based Care to Community-Based Care
Improving Quality of Life: Shifting from Hospital-Based Care to Community-Based Care

Lumonir Hotel, Sidoarjo
September 7, 2019
Preface: Proceeding of the 1st International Conference of Kerta Cendekia Nursing Academy (ICKCNA) 2019

Aims and Scope of the Conference
As the first held, the International Conference hosted by Kerta Cendekia Nursing Academy, Sidoarjo focuses on improving the nursing care by gathering the academicians, practitioners, and researchers which have concern in health care services fields.

The issues of community-based care have brought various considerations in many fields. The continuous health care services should sufficient and adequate distribution of resources, and expansion of health care policies. This conference covers a wide range of critically important sessions from hospital-based care to community-based care and continues to lead the way in integrating that healthcare in order to improve the clients’ quality of life.

The scope of this International Conference is articles in the fields of health, public health, nursing (basic nursing, medical surgical nursing, pediatric nursing, maternity nursing, community health nursing, family nursing, emergency nursing, mental nursing, gerontic nursing, and also nursing management), and Psychological Sciences.

Paper Peer Review
All papers submitted to the Conference were reviewed using blind peer-review process. The Conference Scientific Committee decided about the acceptance or not of the submitted papers, with contribution of competent and expertise reviewers.

Thank
We would like to thank all member that participated in any way in the ICKCNA 2019 Conference and especially:

- The co-organizing Universities and Academies for their support and development of a high-quality Conference Scientific Level and profile.
- The members of the Scientific Committee that honored the Conference with their presence and provided a significant contribution to the review of papers as well as for their indications for the improvement of the Conference.
- All members of the Organizing Committee for their help, support, and spirit participation before, during, and after the Conference.
- The Session Organizers for their willing to organize sessions of high importance and for their editorial work, contributing in the development of valued services to the Conference.
CONFERENCE DETAILS

Chairman
Agus Sulistyo Wati, S.Kep., M.Kes | Kerta Cendekia Nursing Academy, Sidoarjo

Scientific Committee
Assoc. Prof. Dr. Chintana Watcharasin | Burapha University, Thailand
Assist. Prof. Dr. Yupin Tanatwanitch | Burapha University, Thailand
Assist. Prof. Dr. Jinjuta Chaisena Dallas | Burapha University, Thailand
Assist. Prof. Dr. Chanandchidadussaddee Toonsiri | Burapha University, Thailand
Hem Kumar Nepal, RN, MNS | Clinical Nurse Quality Management Service in Mongar Regional Referral Hospital, Bhutan
Kusuma Wijaya Ridi Putra, S.Kep.Ns., MNS | Kerta Cendekia Nursing Academy, Sidoarjo
Faida Annisa, S.Kep.Ns., MNS | Kerta Cendekia Nursing Academy, Sidoarjo

Organizing Committee
Meli Diana, S.Kep.Ns., M.Kes | Kerta Cendekia Nursing Academy, Sidoarjo
Marlita Dewi Lestari, S.Kep.Ns., M.Kes | Kerta Cendekia Nursing Academy, Sidoarjo
Dini Prastyo Wijayanti, S.Kep.Ns., M.Kep | Kerta Cendekia Nursing Academy, Sidoarjo
Elok Triestuning, S.Psi., M.Si | Kerta Cendekia Nursing Academy, Sidoarjo
Sofi Nur Rahman, SM | Kerta Cendekia Nursing Academy, Sidoarjo
Hj. Muniroh H. Mursan, Lc. | Kerta Cendekia Nursing Academy, Sidoarjo
Nanda Ratri Nurwanti, SE | Kerta Cendekia Nursing Academy, Sidoarjo
Ibnul Mubarok, S.Kom | Kerta Cendekia Nursing Academy, Sidoarjo
Anita Dewi Andyni, S.Kep | Kerta Cendekia Nursing Academy, Sidoarjo
Susila Nur Islami | Kerta Cendekia Nursing Academy, Sidoarjo
Sri Wiji Lestari | Kerta Cendekia Nursing Academy, Sidoarjo
M. Fatkhul M. | Kerta Cendekia Nursing Academy, Sidoarjo
Febriany Carla Prameswary | Kerta Cendekia Nursing Academy, Sidoarjo
Dini Fridasari | Kerta Cendekia Nursing Academy, Sidoarjo
Connie Wahyu Wijayanti | Kerta Cendekia Nursing Academy, Sidoarjo
Andan Ayu Ariyanti | Kerta Cendekia Nursing Academy, Sidoarjo
Moch. Rifki N. | Kerta Cendekia Nursing Academy, Sidoarjo
Muhebbi | Kerta Cendekia Nursing Academy, Sidoarjo
Indra Muhammad | Kerta Cendekia Nursing Academy, Sidoarjo
Marita Mileinia | Kerta Cendekia Nursing Academy, Sidoarjo
Elsa Meilani Ekasari | Kerta Cendekia Nursing Academy, Sidoarjo
KEYNOTE SPEAKER

Assistant Professor Dr Pornchai Jullamate  
(Dean of Faculty of Nursing, Burapha University Thailand)

Theme: Resilience of Elderly Patient

Professor Dr Yoshiko Tsukada  
(School of Nursing, Saku University, Japan)

Theme: Quality of Life of Elderly in Japan
INVITED SPEAKER

Hem Kumar Nepal, RN, MNS
(Clinical Nurse at Quality Management Service in Mongar Regional Referral Hospital, Eastern Bhutan)

Theme: Role of Nurse in Patient Discharge

Riesmiyatiningdyah, S.Kep., Ns., M.Kes
(Lecturer of Pediatric Nursing at Kerta Cendekia Nursing Academy)

Theme: Parenting Effects on Child's Health

## Chapter 1 Material of Conference Participants (Oral Presentation) ................. 1-168  
*Lembunai Tat Alberta, Dwi Utari Widyastuti* ...................................................... 1-7  
The Effect of Breathing Exercises: Pursed-Lips Breathing and Diaphragm Breathing in COPD Patients.  
*Dwi Ananto Wibrata, Reny Nur Afni Putri, Faida Annisa, Siti Nur Kholifah* .... 8-11  
Autogenic Relaxation for Postoperative Caesarean Section Pain in RSAD Kodam V Brawijaya Surabaya.  
*Jufri, Roby Aji Permana, Ibnu Widagdo* ............................................................. 12-18  
Non-Pharmacological Therapies to Improve Patient Sleep Quality in ICU/CCU: Literature Review.  
*Elfa Lailatul Izza* ................................................................................................. 19-25  
Effect of SEFT (Spiritual Emotional Freedom Technique) Therapy on Decreasing Levels of Anxiety in Students of Class VIII SMP That Will Face Middle Semester Exams in the 4th Junior High School of Muhammadiyah Surabaya.  
*Sosilo Yobel* ........................................................................................................... 26-34
Dewi Andriani .............................................................................................. 35-41

Effects of Use of Red Ginger Compress on Pain in Elderly That Suffer Uric Acid: Case Study.
Mustayah, Sarah Dwi Anggraeni ........................................................................ 42-48

Relationship Between Educational Level and Early Breastfeeding Side Meal in Gemurung Village Sidoarjo Regency.
Nurul Pujiasutti, Binarti Dwi Wahyuningsih ....................................................... 49-56

Brain Gym Improves Cognitive Function for Elderly with Demensia.
Suhari, Anggia Astuti, Primasari Mahardhika Rahmawati, Musviro ................. 57-62

The Effect of Cold Compress on Pain in Muscle Injury After Collection of Loads in The JM Fitness Center, Kapas Madya Village, Kenjeran Subdistrict, Surabaya.
Rina Budi Kristiani .............................................................................................. 63-67

Difference Metacognitive Skills with Achievement Index in Nursing Students Diploma in Lumajang.
Achlish Abdillah, Indriana N. Istiqomah, Laili Nur Azizah ..................................... 68-74

The Comparison Between Progressive Muscle Relaxation and Slow Deep Breathing Exercise on Blood Pressure in Hypertensive Patients.
Muhammad Ikhwan, Agus Setyo Utomo, Tri Nataliswati .................................... 75-86

Cadre’s Empowerment and Counseling in Increasing Society’s Behavior About Content and Effect of Pesticides on Fresh Vegetables.
Nurul Hidayah ..................................................................................................... 87-94

Proactive Public Health Approach to Prevention of Occupational Disease on Farmers in Lumajang.
Eko Prasetya Widianto, Arista Maisyaroh, Rizeki Dwi Fibriansari ...................... 95-101

Individual Health Beliefs about Osteoporosis on Adult Self-Care Behavior in Mojo Surabaya.
Jujuk Proboningsih, Aida Novitasari, Anita Joeliangina, Masamah Almahmudah, Sri Hardi Wuryaningsih ................................................................. 102-107

The Important of Social Support for Quality of Life People with Spinal Cord Injury: A Perspective.
Aby Yazid Al Busthomy Rofi’i ........................................................................... 108-110
Parental Behaviors in Influencing Dental Caries Occurrence at The First and Second Graders of Elementary School.

Anggraini Dwi Kurnia, Nur Melizza, Nur Lailatul Masruroh, and Chandra Dewi Kusumaningtyas ................................................................. 111-116

The Effect of Diabetic Feet Spa Therapy to Blood Glucose Level and Sleep Quality of Diabetes Mellitus Patient.

Erika Martining Wardani, Lono Wijayanti, Nur Ainiyah .................................................. 117-121

Self-Efficacy and Selected Demographics as Determinants of The Family Behavior on Examination for Patients with Tuberculosis in Pamekasan.

Ahmadi, Arif Rahman Hakim .................................................................................. 122-132

The Relationship of Individual Characteristics and Nurses Caring Behavior in Jombang General Hospital.

Sylvie Puspita, Ardiyanti Hidayah ........................................................................ 122-132

Cognitive Stimulation Therapy on Elderly with Dementia in Panti Werdha Pandaan, Pasuruan.

Elok Triestuning, Berliany Venny Sipollo ................................................................. 139-144

The Effect of Piper Betle Leaf Extract Lotion to Older People Skin Moisture.

Oda Debora, Betty Dwi Kartikasari ........................................................................ 145-149

Application of Classification and Regression Tree (CART) on Life Independency based on Functional Capacity and Health Condition of Older Adults in Kasin Village Bareng Health Center, Malang.

Wisoedhanie Widi Anugrahanti, Oda Debora .......................................................... 150-157

The Effect of Boiled Ginger Drink Jahecang on Blood Pressure Reduction in Hypertension Patients in The Hamlet of Baban Arosbaya Village Arosbaya District Bangkalan Regency.

Anik Supriani, Nabila Aisyah Andinata, Winda Maulidia Yanti, Sutomo, Nasrul Hadi Purwoanto, Edy Siswantoro ...................................................... 158-162

Correlation between Menstrual Pain and Level of Cortisol among Nursing Student of Nahdlatul Ulama University, Surabaya.

Yurike Septianingrum, Nety Mawarda Hatmanti .................................................... 163-168

Chapter 2 Material of Conference Participants (Poster Presentation) ............... 169-252

Monthly Income of Family, Educational Level, Knowledge, and Eating Behaviors among People with Type 2 Diabetes Mellitus in Sidoarjo.

Kusuma Wijaya Ridi Putra, Chanandchidadussadee Toonsiri, Suwanna Junprasert .................................................. 169-173
Relation between Family Support and Anxiety in Preoperative Patients in Indonesia.
Faida Annisa, Deny Suhermanto ........................................................................  174-178

Issues and Trends in Nursing Administration: Nursing Staff Shortage.
Faith Kanini Mutisya ...........................................................................................  179-193

The Influence of Passive Range of Motion (ROM) on Lower Extremity in Postoperative Patients with Spinal Anesthesia in Rumkitban Sidoarjo.
Meli Diana, Ainul Yachin ....................................................................................  194-198

Relationship with The Level of Anxiety Hemodynamic Status (Pulse) in Patients Pre Sectio Caesaria Operations in A Unit of The Central Surgical (UBS) of Muslim Hospital of Siti Hajar, Sidoarjo.
Agus Sulistyowati, Agus Wiyono ........................................................................  199-207

Nurse’s Efforts to Transform of Nurse Roles in Primary Health Care from Promotive to Curative in Managing Patients with ACS in Primary Health Care Malang Regency, East Java, Indonesia.
Dini Prastyo Wijayanti, Kumboyono, Titin Andri Wihastuti, Septi Dewi Racmawati ............................................................................................................  208-214

The Relationship between Nurse Performance and Inpatient Satisfaction in The Jasmine Room of Delta Surya Hospital, Sidoarjo.
Marlita Dewi Lestari, Fitria Ningsih ...................................................................  215-220

Awareness on Health Effects of Smoking among Secondary School Children in Bangladesh.
Jebunnahar, Happy Bandana Biswas, Sazzad Hossain, Shariful Islam .............  221-231

Knowledge and Practice of Weaning among Bangladeshi Lactating Mother.
Kamrun Naher, Happy Bandana Biswas, Sazzad Hossain, Hee Soon Kim .........  232-240

Ankle Pumpling Exercise and Leg Elevation In 30° Has the Same Level of Effectiveness to Reducing Foot Edema at Chronic Renal Failure Patients in Mojokerto.
Prastika, Supono, Sulastyawati ............................................................................  241-248

Nurse Motivation in Admission A New Patients at Menur Psychiatric Mental Hospital Surabaya.
Suprianto, Hadi Purwanto, Krisnawati ...............................................................  249-252
ABSTRACT

Background: To realize active and independent learning need concrete ways of learning strategy and direction. According to O'Neill and Brown in Usman, Mulbar (2008) argued that metacognition is the process whereby a person thinks about thinking to develop strategies to solve problems. With metacognitive learner can build a new plan for the operation of metacognition in learning-centered planning, problem-solving, and evaluation during a learning activity. Nursing students should apply the metacognitive ability to earn achievements.

Objectives: The purpose of this study wanted to study the differences in student achievement are used with no use of metacognitive skills when performing activities of student learning.

Methods: The design used is a cross-sectional comparative study. The population is all students of Diploma in Nursing in Lumajang totaled 3,275 people taken by simple random sampling. They measure devices in the form of a questionnaire. Analysis of continuous data sample characteristics describes as mean, SD, minimum, maximum in the frequency, and percent. Differences in metacognitive skills with student achievement index analyzed by paired sample t-test.

Results: There are differences in student achievement that using metacognitive skills with who do not use metacognitive skills while doing the learning activities indicated significance value of 0.00 with a 95% confidence interval.

Conclusion: Metacognition ability one can be used to improve the achievement of students. Learning techniques need to be implemented to stimulate metacognitive skills, and when students accustomed to applying metacognitive skills while learning the understanding of learning, especially in nursing science will increase.

Key words: Metacognitive, achievement index, student.

INTRODUCTION

Nursing as a profession then high nursing education curriculum is based on a robust framework of educational concepts that include: the mastery of science and technology Nursing, resolve the problem scientifically, attitudes, behavior and professional capability, self-study and independent and learn in society.

The hope of education and the learning process of nursing can be conceived and developed in a focused to cultivate the professional skills that include intellectual, technical skills and interpersonal skills required to carry out nursing care services to clients (Nursalam, 2003).

The learning process of nursing can be arranged directionally able to cultivate professional skills include intellectual, technical skills, and interpersonal skills required to carry out nursing care services to clients (Nursalam, 2003). To realize active and independent learning need concrete ways of learning strategies and direction. To ensure the problem-solving ability by O'Neill and Brown in Usman, Mulbar (2008) states that metacognition as a process in which a person thinks about
thinking to develop strategies to solve problems. With metacognitive learner can build a new plan for the operation of metacognition in learning-centered planning, problem-solving, and evaluation during a learning activity.

Nursing students should apply metacognitive skills to build a strategy to solve the problem, a person's knowledge of the process of thinking itself. Besides learning to use metacognitive learner can create a new plan for the operation of metacognition in learning-centered planning, problem-solving and evaluation during a learning activity. At the end of students' academic achievement is expected to be no improvement.

The general purpose of this research is studying the differences in student achievement using metacognitive skills with who do not use metacognitive skills when performing activities on student learning 3 Nursing Diploma Course.

While the specific goal is to study the relationship metacognition ability with the ability of the real understanding of nursing during a learning activity, learning the difference metacognition ability with academic achievement performance index as well as examining the different achievements of students use metacognitive skills with those not using metacognitive skills while doing learning activities.

METHODS
Study Design
The study design was a cross-sectional comparative study.

Setting
This research was conducted at Nursing Diploma Program of University of Jember, Lumajang Campus.

Research Subject
The target population is the overall student who numbered 275 people. The inclusion criteria in this study as follows: 4th-semester student, was at the test site and willing to become a research subject, while the sample size in this study was 22 people using randomization techniques. The sample divided into four levels of achievement with each achievement level comprised of 5-6 respondents.

Instruments
Identification of the following research variables is independent variables and the dependent variable metacognitive skills that student achievement index while the operational definition of variables metacognitive skills is the ability of cognitive knowledge of the declarative knowledge, procedural knowledge, and conditional knowledge. And the strength of metacognition regulation, namely planning, information management strategies, comprehension monitoring, debugging strategies, and evaluation.

In this study, metacognitive skills were measured using questionnaires Metacognitive Awareness of Reading Strategies Inventory (MARSI), which has been translated and modified by Poncorini (2006).

The dependent variable is the form of academic achievement whereas learning success expressed by four levels Grade Point Achievement (GPA) as follows: GPA 2.00 to 2.50 pretty, GPA 2.51 - 2.75 satisfactory, GPA 2.76 - 3.50 highly competent, GPA 3.51 to 4.00 with honors (cum laude).

Measurement tool uses a list of the value of the learning achievement, with a kind of absolute measurement scale. The research instrument used a questionnaire composed of several groups of questions that include: Identification of the
respondents, and the data take in the form of a name, age, gender, past semesters.

Data collection techniques using primary and secondary data. The primary data obtained through a questionnaire containing statements and questions that prepared following the purpose of research. This data is directly collected from the study through a survey with Likert scale to measure metacognitive skills using metacognitive questionnaire Awareness of Reading Strategies Inventory (Marsi) which has been translated and modified by Poncorini (2006). Secondary data is data obtained from the achievement of learning outcomes recapitulation data cumulative value of the index during the second semester.

Test validity and reliability of this research through SPSS using Cronbach’s Alpha test item-item questionnaire called internal consistency.

Data Analysis
Analysis to examine the difference metacognitive skills with student achievement index analyzed by paired sample t-test.

Ethical Consideration
This research has gone through an ethical test from the Nursing Diploma Program of University of Jember.

RESULTS
Characteristics of Respondents

Table 1. Distribution of Frequency of Respondents in the Nursing Diploma Program of University of Jember, Campus Lumajang (n = 22).

Interpretation of results paired sample t-test analysis found that the metacognitive skill had correlation with increasing student achievement index at Nursing Diploma Program in Lumajang as indicated by the significant value of 0:00 with 95% confidence intervals as in Table 2.

The Differences in Student Achievement using the Metacognitive Skills that Do Not use Metacognitive Skills while Doing Learning Activities

The differences in student achievement that use the capabilities metacognitive those who did not use metacognitive skills learned while doing the activity were no difference where the value of cognitive ability is directly proportional to the amount of the index means the achievement of positive range, can see in Figure 1.

![Figure 1](image)

**Figure 1.** The Differences in Student Achievement using the Metacognitive Skills that Do Not use Metacognitive Skills while Doing Learning Activities

DISCUSSION

Relationship between Studying Metacognition Abilities and Nursing Material Comprehension Ability While Doing Learning Activities

According the results on the table 2, the metacognitive skill had correlation with increasing student achievement index at Nursing Diploma Program in Lumajang as indicated by the significant value of 0:00 with 95% confidence intervals.

The results of this study are consistent opinions Toccasu Project (2008). According Toccasu Project (2008), metacognitive is the ability to learn how to learn by considering one of them to participate in solving problems such as the work of nursing science test.

In this study focused problem solving based on the service delivery of nursing care when students perform clinical nursing practice following the concept of nursing by Kozier (1997). The nursing services provided to clients in the form of nursing care to solve the client’s problems following the 14 basic human needs (Hendersen, 1964).

The results also support the research results Hsu LL (2010) found that the ability of metacognitive skills in nursing students in Taiwan can develop both in class and in the clinical nursing practice. The results also consistent research results from Kuiper (2005), which says the use of methods of learning self-regulation in the practice environment can stimulate metacognitive activity mainly clinical experience and critical thinking skills in problem-solving nursing.

If the student has a sufficient basis, metacognitive skills students are expected to be able to perform activities of nursing care started stage assessment, nursing diagnosis, action planning, implementation and evaluation of nursing actions successfully.

Flavel in Livingston (1997) explains that metacognition has two kinds of metacognitive knowledge itself first and second regulation of metacognition.
Relationship between Metacognition Abilities and Academic Achievement

If the student has a sufficient basis, metacognitive skills students are expected to be able to perform activities of nursing care started stage assessment, nursing diagnosis, action planning, implementation and evaluation of nursing actions successfully.

Flavel in Livingston (1997) explains that metacognition has two kinds of metacognitive knowledge itself first and second regulation of metacognition. Also, according to OLRC News (2004) each of the two metacognitions divide into several sub capabilities includes: understanding of metacognition consists declarative knowledge is knowledge about themselves as learners and strategies, skills and learning resources needed. The second procedural knowledge is knowledge of how to use what known in the declarative knowledge in learning activities and conditional knowledge that when using a procedure knowledge, skills or strategies and when these things are not in use.

The regulation of metacognition consists of five sub capability, which includes planning, information management strategies, comprehension monitoring, debugging, and evaluation. Planning is the ability to make a program. Information management strategies are the ability of the plan to manage information relating to the process of learning. Comprehension monitoring is the ability to monitor the learning process. Debugging the strength of the strategy used to correct the wrong action in education, as well as the sub-component evaluation is the ability to evaluate the effectiveness of learning strategies whether he would change his approach, given up or put an end to these activities.

To do the exam or test in the nursing sciences, metacognitive skills for each sub-ability of metacognition be fundamental in the learning process of nursing sciences. So that when students use metacognitive abilities while learning it will be easier when implementing the learning process in the classroom or when running tests or final exams, students can quickly answer that will ultimately improve academic achievement.

The Differences in Student Achievement using the Metacognitive Skills that Do Not use Metacognitive Skills while Doing Learning Activities

There are differences in student achievement that using metacognitive skills with who do not use metacognitive skills while doing activities where cognitive ability have a positive relationship with the value of the index achievement, can see in Figure 1.

The students who are using metacognitive skills will do the following things: has a goal before the study, make notes or summary of the current learning. They also have a particular strategy to increase the understanding as creating tables or images, circling or underlining, set the pace of learning, use tools typefaces to identify, discuss or ask another friend who does know, add references, summed up the material, analyze or look for the relation of subject matter being learned. They can make the question to be answered themselves and try to guess the meaning of words or sentences understandable.

If things are familiar with, it will increase the understanding of the lesson so that when carrying out the test will get an excellent performance than not using metacognitive skills.

CONCLUSION

This study concluded that there are differences in student achievement using metacognitive skills with those not using
metacognitive skills when performing activities student learning in Nursing Diploma Program of University of Jember Campus Lumajang, indicated with a significance value of 0.00 with a 95% confidence interval.

SUGGESTION
The ability of metacognition can be used to improve student learning achievement in Nursing Diploma Program of University of Jember, campus Lumajang, therefore the lecturer needs to be implemented learning techniques that can stimulate metacognitive skills to enhance learning achievement. When metacognitive skills have become accustomed to using when learning activities, it will improve the understanding of learning nursing sciences.
