Specialization: *Social Sciences & Humanities.*

Dr. Karaisas Petros

Country: Greece

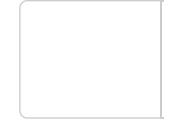

Specialization: *Electric Machines, Power Electronics, Vibration Analysis.*

Dr. Jammi Ashok

Country: East Africa

Specialization: *Pattern Recognition, Image processing.*

Dr. Dnyaneshwar Kantaram Jadhav

Country: India

Specialization: Dermatology.

Dr. K. G. Padmasine

Country: India

Specialization: Nano Electronics, Embedded Systems.

Dr. Sidhartha Sankar Kar

Country: India

Specialization: Pharmaceutical, Medicinal Chemistry.

Prof.Dr Brijendra Pratap Mishra

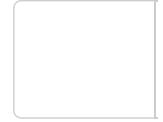

Country: India

Specialization: Medical Biochemistry,
REPRODUCTIVEand RESPIRATORY SYSTEM.

Dr. Samer El-Sayed Mohamed El-Sayed Ismail

Country: Egypt

Specialization: Agricultural Biotechnology, Seeds, GM crops, Molecular genetics, Fragment Analysis, FISH, Real-Time PCR, Mutation Studies, Molecular Markers, PCR, Sequencing, Genome Mapping, Stem Cells, Genomics,Bioinformatics, Clinical Human Genome Studies..

Dr. S. RAJASHEKARA

Country: India

Specialization: Animal Sciences,
Ornithology,Entomology, Biodiversity and Conservation,
Behaviour, Ecology, Bio-Ecology, Behavioral ecology,
Environment Impact Assessment, Cytogenetics,
Population Genetics, and Wildlife Biology.

Asst. Prof. Dr. Praveen Kumar Sharma

Country: India

Specialization: Chemistry, Organic synthesis, Medicinal Chemistry.

Dr. Srinivasa Rao Sirugudu

Country: India

Specialization: *Corrosion Control Methods, Surface Analytical Techniques, Electrochemical Studies, Water analysis and Purification methods.*

Dr. Dilip Kumar Behara

Country: India

Specialization: *Chemical Engineering, Nanotechnology, Material Science and Solar Energy.*

Dr. Neda Nozari

Country: Iran

Specialization: *Obesity, Gastrointestinal Diseases.*

Dr. Esosa Mark Iriowen

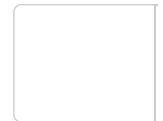

Country: USA

Specialization: *Physical Science, Environmental Science.*

Dr. Prawej Ansari

Country: Bangladesh

Specialization: *Anti-Inflammatory, Analgesic, Antioxidant, Antidiabetic.*

Dr. Abdelmotalab Osman Mahmoud Dalil

Country: Sudan

Specialization: *Accounting and Finance.*

Dr.K.Ganesh Kumar

Country: India

Specialization: *Network Security.*

Dr Satish Geeri

Country: India

Specialization: *Polymer Nanocomposites, FEM, CAD, CAM, Advanced Manufacturing, Smart Materials.*

Katerina L. Kabakhidze

Country: Moscow

Specialization: *Linguistics, Intercultural Communication, Teacher Training, Higher Education Development, Russian Studies.*

Dr. Saif Ur Rehman

Country: Pakistan

Specialization: *Data Mining, Graph Mining, Social Network Analysis, Machine Learning and Semantic Computing.*

Ahmed Mohammed Jihad Al-Kubaisi

Country: Iraq

Specialization: *Human Geography, Geomatics Maps, City planning, Services, Urban Development.*

Prof. Ignatius Topno

Country: India

Specialization: *Research Methodology and Articles connected with Education.*

Dr. Amit Kumar Thakur

Country: India

Specialization: *Thermal Engineering Biofuels.*

Dr. Esra Sipahi

Country: Turkey

Specialization: *Business Administration-Management and Organization.*

Dr. Umar Lawal Aliyu

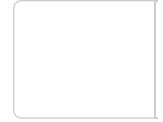

Country: Nigeria

Specialization: *Management.*

Dr. Fatma Mohamed Elnabway Ward

Country: Egypt

Specialization: *Science, Microbiology, Biotechnology, Phycology, Medicinal plants, seaweeds.*

Dr. Ismaila Emahi

Country: Ghana

Specialization: Biosensors Biofuel Cells Aptamers

Biofiltration Nucleic Acids Chemistry.

Dr. Abdul Rabb

Country: Pakistan

Specialization: Gastroenterology & Hematology,

Diabetes Mellitus Hematology.

Dr. Hiba Riyad Jameel Al-abodi

Country: Iraq

Specialization: Biological Sciences.

Dr. Kachalla Mohammed

Country: Nigeria

Specialization: Structural analysis, Structural design,

Finite element, reliability, Steel structures, Reinforced

concrete.

Dr. Mohammad Anamul Haque

Country: Saudi Arabia

Specialization: Physiotherapy, Hospital Management,

Public Health.

Dr. Kavitha Nachimuthu

Country: Ethiopia

Specialization: Rural Development and Agricultural

Extension.

Dr. Kaan Bilge

Country: Turkey

Specialization: Polymer composites; Mechanics of

materials; Nanocomposites; Biomass conversion; Green

composites.

Dr Kamran Yeganegi

Country: Iran

Specialization: Cluster Development, Facility planning, Strategic Management.

Dr. Daniel Anthoni Sihasale

Country: Indonesia

Specialization: Geography and Environmental Science, Environmental conservation, Tourism management, Ecotourism Planning and development.

Dr. Moetaz Soubjaki

Country: Lebanon

Specialization: Strategy Management, Human Resources, Performance management, Training and development.

Prof. Dr. Wafai Zaki Azer Mikhail

Country: Egypt

Specialization: Life Sciences, Invertebrate Ecology, Environmental Sciences.

Dr. Aiat Hegazy

Country: Egypt

Specialization: Renewable energy Nanomaterials for solar cells and hydrogen Production.

Dr. Lamiaa Mageed Sayed Ibrahim

Country: Egypt

Specialization: Clinical Biochemistry- Genes – Health and Disease- Molecular Biology.

Dr. Arvind Prasad Dwivedi

Country: India

Specialization: Physical and Environmental chemistry.

Dr. Mohammad Rafiqul Islam

Country: Bangladesh

Specialization: Sample size and sampling Design, Time series Analysis, Temporal Disaggregation,

Econometrics, Systems of National Accounts, Macroeconomics, Bangladesh economy, Sampling Techniques.

Dr. Masood Ayoub Kaloo

Country: India

Specialization: Spectroscopy, Molecular Recognition, Analytical Chemistry, Conjugated molecules, Environmental Chemistry.

Dr. Tayseer Elamin Mohamed Elfaki

Country: Sudan

Specialization: Medical Laboratory Science.

Dr. Julie S. Berame

Country: Philippines

Specialization: Biology, Environmental Sciences.

Dr. Warkaa M. Ali Al-Wattar

Country: Iraq

Specialization: Oral Histopathology, Dental Laser.

Dr. Ibrahem Abdul Razak Al-Ani

Country: Iraq

Specialization: Civil Engineering, Hydrology.

Dr. Zafer Omer Ozdemir

Country: Turkey

Specialization: Chemistry, Biochemistry, Polymer Chemistry, HPLC, LC-MS analyses, Peptide Synthesis.

Dr. Abdulameer Kazem Farhood

Country: Iraq

Specialization: Nuclear Physics, Radiation Physics, Radon pollution, Dosimetry, Radiation effects on materials, material science, Semiconductor Physics.

Dr. Alejandro Rodriguez Rodriguez

Country: Mexico

Specialization: Higher Education Leadership
Organizations Management.

Dr. Roslina Abdul Rahim

Country: Malaysia

Specialization: Acute kidney injury, NASH, NAFLD and Human Physiology.

Prof. Antonio Jose de Jesus Evangelista

Country: Brazil

Specialization: Infectious and parasitic diseases, Medical Microbiology, Microbial Virulence Factors, Antimicrobial Resistance Mechanisms and Alternative Animal Models for Development of Antimicrobial Strategies.

Dr. Nihad Abdulateef Ali Kadhim

Country: Iraq

Specialization: Avian Physiology.

Dr. Abubkr Ahmed Elhadi Abdelraheem

Country: Sudan

Specialization: Accounting and Finance.

Dr. Laxman Khanal

Country: Nepal

Specialization: Anatomy, Histology.

Instruction to Authors

How to Submit Articles in IJAR (an open access journal)

Manuscripts should be mailed to **journalijar@gmail.com** in only '.doc' format. Pdf files are not accepted. Articles can also be uploaded through **Online Submission.** (<http://journalijar.com/upload-articles>) After receiving the article, an article number will be generated and mailed to the person submitting document within 48 hours.

If documents can't be sent through email, please fill the form on Contact Us page of Website.

Every article should be attached with a covering letter including author's full address with Telephone/Fax Number. Authors have the flexibility of selecting any

panel of two to four reviewers for reviewing his/her article, however IJAR, has the authority to designate other reviewers.

Article Types

Three types of manuscripts may be submitted:

Regular articles:

Regular articles are findings or careful examination of facts and ideas. They contain sufficient detail of the work to make the analysis precise and clear. The length of article should be sufficient to provide complete detail and gist of work.

Short Communications:

It records Results of investigations, describing new models and hypotheses, methods, techniques or apparatus. The length of short communication is may be around 1000 to 2000 words.

Review Articles:

Articles are examined by an editorial board of assigned reviewers. The authors are informed of reviewers' comments within two weeks. Articles may be submitted to editorial board for reexamination. IJAR publishes all accepted articles within 2 weeks of submission.

Review Process

All manuscripts are reviewed by the editorial board and assigned reviewers. Decisions will be made as rapidly as possible, and the journal strives to return reviewer's comments to authors within 2 weeks. The editorial board will re-review manuscripts that are pending for revision.

It is the goal of the IJAR to publish accepted manuscripts within 2 weeks after submission.

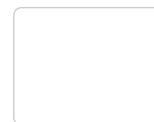

Regular articles

- Every page beginning from the first one, should be given numbers and text should be double-spaced. Title should be compact and brief and the title page should contain Author's full name, affiliations, name of corresponding author, his/her phone or mobile number, fax and email that are necessary for publication on research paper publication sites.
- Abstract should be precise and self-explanatory presenting topic, state and scope of experiments, including substantial data and indicate observations and conclusions. It may vary from 100 to 250 words. Abstract should be in written in third person and in past tense with complete sentences and active verbs. Abstract should use Standard Nomenclature and not contain abbreviations.
- From Abstract, 3 to 6 keywords should be given to provide indexing references.
- **Following the abstract, about 3 to 6 key words that will provide indexing references to should be listed.**
 - The introduction of article contains precise description of problem, literature relevant to subject matter and the proposed strategy and solution. It should be written in easy language, easily comprehensible by colleagues coming from varied disciplines of science.
 - The resources and procedures described should be complete so that the experiments can be repeated with provided descriptions. Whereas the details of previously published procedures are only cited, the description of new procedures should be given at point and the important modifications in published procedures, if any,

should be mentioned in brief. Trade Names should be capitalized and the manufacturer's name and address should also be included. Sub headings should be used as per requirement.

- Results should be precise and clear. They should describe the observations and conclusions of experiments in past tense. Observations and conclusions, previously published follow present tense. Conclusions are explained largely without any reference to literature. Results should not contain deliberations, assumptions or interpretation of data. These are put in Discussions sections.
- The discussions are deliberations on observations of contemporary and past annotations on the topic. The conclusion should be described in a few sentences at the end of paper. The results and discussion sections contain subheadings and both sections can also be combined as per requirement.
- People, contributions and funds etc. should be acknowledged in brief.
- Tables should be minimum and as simple as possible. They should be typed with double space from heading to foot notes. Each table should have a heading and a story and start on a new page and be numbered in Arabic numerals. Tables should be self-explanatory and without any reference to text. The details of procedures followed in experiment are described in story and not in text. The table or graph and the text should not contain any repeated data.
- Pictorial stories should be in numerical order on a new sheet. Graphics and Tables should be prepared in MS Word. To label figures, Arabic numerals and for their parts, Upper case letters should be used (Fig 1). Every Story should start

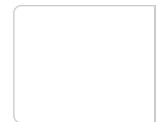

with a title and include sufficient details to make figure comprehensible without any need of reading the text. The info given in stories should not repeat in text.

- References: Reference coupled with author's name should follow date of reference in parentheses. If authors are more than two, the first author's name is followed by 'et al'. If author has two or more manuscripts published in same year, the reference, both in text and in reference list, should be acknowledged by lower case letters 'a' and 'b' after the date to distinguish the works.

Examples:

Vikas (2008), (Steddy et al., 2012), (Kelebeni, 1983), (Singh and Chandra, 1992), (Chege, 1998; Gold, 1987a, b; Blake, 1993, 1995). References should be given in alphabetical order at the end of paper. Reference list should not include articles under preparation or articles submitted for publication, unpublished observations, personal communications etc. They should be mentioned in article text (e.g., A. Kingori, University of Nairobi, Kenya, personal communication). The names of journal are abbreviated as per chemical abstracts. The accuracy of abstracts is the sole responsibility of Authors.

References should be listed at the end of the paper in alphabetical order. Articles in preparation or articles submitted for publication, unpublished observations, personal communications, etc. should not be included in the reference list but should only be mentioned in the article text (e.g., A. Kingori, University of Nairobi, Kenya, personal communication). Journal names are abbreviated according to Chemical Abstracts. Authors are fully responsible for the accuracy of the references.

Tan, A., Voegtline, M., Bekele, S., Chen, C.S. and Aroian, R.V. (2008): Expression of Cry5B protein from *Bacillus thuringiensis* in plant roots confers resistance to root-knot nematode. *Biol. Control.*, 47: 97-102.

Pandey, R. and Kalra, A. (2003): Root knot disease of ashwagandha *Withania somnifera* and its ecofriendly cost effective management. *J. Mycol. Pl. Pathol.*, 33(2): 240-245.

Charnley, A.K. (1992): Mechanisms of fungal pathogenesis in insects with particular reference to locusts. In: Lomer CJ, Prior C (eds) *Biological Controls of Locusts and Grasshoppers: Proceedings of an international workshop held at Cotonou, Benin*. Oxford: CAB International, pp. 181-190.

Short Communications

Short Communication may contain maximum three pictures and one table. They present a complete study limited in scope than found in full-length papers. Short communication is like the article preparation mentioned above with following differences:

Proofs, Reprints and manuscript charges: Electronic proofs will be sent (e-mail attachment) to the corresponding author as a PDF file. Page proofs are considered to be the final version of the manuscript. With the exception of typographical or minor clerical errors, no changes will be made in the manuscript at the proof stage. Because IJAR will be published online, authors will have free electronic access to the full text (PDF) of the article. Authors can freely download the PDF file from which they can print unlimited copies of their articles.

The accepted manuscripts will be published online free of cost, but the authors have to pay processing fees only which will be very nominal. Before the accepted paper is

published we will intimate the fees in the acceptance letter. Kindly note that ability to pay the publication fee doesn't necessarily guarantee that the paper will be accepted for publication in IJAR, because we, at IJAR, believe that quality comes first.

Copyright:

Only those articles should be submitted that have not been published in past anywhere (except in the form of an abstract or as part of a published lecture, or thesis) or have not been under consideration for publication anywhere. If the article is accepted for publication, author agrees to automatically handover all the copyrights to publisher.

International Journal of Advanced Research (IJAR)

ISSN 2320-5407 A Peer Reviewed, Open Access, CrossRef Indexed Journal

About The Journal

International Journal of Advanced Research (IJAR) is a Crossref Linked journal, Provides permanent DOI to every Published Article and the metadata is regularly submitted to different Indexing engines (<http://www.journalijar.com/indexing/>). The IJAR is has got **h-index of 31** and **i10-index of 308** as per Google Citation Report (<https://scholar.google.co.in/citations?user=VHkDWAUAAAJ&hl=en>).

International Journal of Advanced Research (IJAR) seeks Review articles, Case reports and original contributions from all areas of:

Life Sciences:

Agricultural, Biological Sciences, Biotechnology, Biochemistry, Genetics, Molecular Biology, Environmental Science, Ecology, Arachnology,

Biodiversity and Conservation, Entomology, Limnology, Ichthyology, Malacology, Immunology and Microbiology, Neuroscience, Marine Biology.

Health Science:

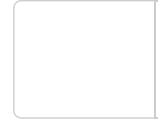

Medicine and Dentistry, Nursing and Health Professions, Pharmacology and Toxicology, Pharmaceutical Science, Veterinary Science, Veterinary Medicine.

Physical and Chemical Science:

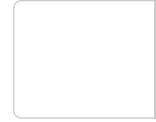

Chemical Engineering, Chemistry, Computer Science, Earth and Planetary Science, Energy, Mathematics, Physics and Astronomy, Engineering, Material Science, Statistics, Law, Commerce.

Engineering:

Aeronautical Engineering, Aerospace Engineering, Automobile Engineering, Agricultural Engineering, Bio Medical Engineering, Ceramic Technology, Chemical Engineering, Civil Engineering, Computer Science & Engineering, Earthquake Engineering, Electrical Engineering, Engineering Chemistry, Engineering Management, Engineering Mathematics, Engineering Physics, Engineering Sciences, Environmental Engineering, Fire Engineering, Genetic Engineering, Industrial Engineering, Information Technology, Instrumentation Engineering, Manufacturing Engineering, Marine Engineering, Material Engineering, Mechanical Engineering, Metallurgical Engineering, Mining Engineering, Natural Sciences, Humanities Network Engineering, Nuclear Engineering, Ocean Engineering, Petroleum Engineering, Polymer Engineering, Production Engineering, Safety Engineering, Software Engineering, Structural Engineering, Systems Engineering, Transportation

Engineering, Telecommunication Engineering, Textile Engineering, Electronics & Communications Engineering, Cloud Computing, Big Data, Big Data Analytics, Data Science, IOT, Artificial Intelligence, Six Sigma, Embedded Systems, Robotics, Compiler Designs, High Performance Computing, Machine Learning, Neuron Networks, Blockchain, Design and Manufacturing, Fluid Mechanics, Cyber Security, Data Analytics, Bio Mechanics, 3D Object Modelling Security, Privacy and Automation, Applied Electromagnetics & RF Circuits, Computer Vision Control Systems, Embedded Systems, ECE Education Research, Integrated Circuits and VLSI, MEMS and Microsystems, Network, Communication and Information Systems, Optics & Photonics, Plasma Science & Engineering, Power & Energy, Quantum Science & Technology, Robotics & Autonomous Systems, Signal & Image Processing and Machine Learning, Solid-State Devices & Nanotechnology, Bluetooth Fibre Optic Communication, Embedded Systems, Nanoelectronics, VLSI, OLED(Organic Light Emitting Diode), Zigbee Technology, Human Area Network, GPRS, HSPA

Social Science and Humanities:

Arts and Humanities, Business Management, Hotel Management, Management, Tourism, Accounting, Decision Science, Education, Economics, Law, Finance, Psychology, Political Science, Physical Education, English Literature, Social Work and History.

The Journal invites original **Research Papers, Review articles, Technical or Case reports and Short communications** that are not published or not being considered for publication.

Abstract

The aim of this research is the synthesize materials Novel of ES-PANI@PdNPs nanocomposites obtained chemically. The synthesis of ES-PANI@PdNPs nanocomposite was prepared by the chemical method using FeCl₃ as a redox initiator (insitu) and refluxed for 48 hours at 500C, then dried at 500C for 24 hours, obtained a brown-black solid and no water-soluble. The nanocomposite is characterized by UV-Vis and Fourier transform infrared (FTIR) spectroscopy, the composite shows absorption of Pd(0) nanoparticles along with ES-PANI peaks at 312 nm. FTIR and UV-visible spectra show an interaction between Pd(0) and ES-PANI. This indicated that Pd(0) zero valence had been formed and that internal reduction processes had occurred by imines and amines toward Pd(II) ions.

Introduction:-

The synthesis of Palladium nanoparticles (Pd@NPs) can be synthesized by two different methods namely. reflux and irradiation as well as research related to the stability of the synthesized nanoparticles. Among the various stabilizers added. polyaniline was found to be the most effective. Pd metal was chosen because Pd is an interesting transition metal element from the point of view of magnetism and has very good catalytic activity. To permanently maintain the zero valence state of metals, solution polymerization of empty nanoparticles containing polyaniline and polypyrrole has been carried out to obtain "MetalPolymer" or "Organometal" nanocomposites [Athawale et al., 2003], [Marulasiddeshwara, et al., 2015]. Zero valent palladium can catalyze the Mizoroki-Heck, and Suzuki-Miyaura reactions and is the strongest and best synthetic material for forming carbon-carbon bonds in organic syntheses, such as in arylation, alkylation, or vinylation reactions with alkenes through reactions with aryl, vinyl, benzyl or allyl halides in the presence of a base, and the carbon-carbon joining reaction catalyzed by transition metal nanoparticles of aryl or alkenyl halides with olefins/alkenes is known as the Mizoroki-Heck reaction. This reaction is one of the best methods for the rapid formation of carbon-carbon bonds [Marulasiddeshwara, et al., 2015]. Among the reactions catalyzed by palladium, the arylation of alkenes called the Mizoroki-Heck reaction is the most important carbon-carbon bond formation process. Over the last 25 years, a large number of applications have been developed on a laboratory and industrial scale [Alacid et al., 2008]. Nanotechnology has become an important research area in the development of engineered materials that can be integrated into technology. The synthesis and selective application of engineered materials are very important for the development of nano-functional devices. Metal-polymer nanocomposite materials are expected to become an important class of materials in nanotechnology. These engineered materials have very different electronic and optical properties from the original nanoparticles.

Artificial nanocomposites displaying novel properties can be synthesized by careful selection and appropriate combinations of the two components [Athawale et al., 2006].. Polyanilines are promising because of their ease of synthesis, low-cost environmental stability, doping-induced processability, highly attractive conductivity, and optical properties. As a result, extensive research has been conducted on polyaniline applications in sometimes remote technological domains. Polyaniline anticorrosion coating, and catalytic support. [Dhaouiet al., 2010].The development of nanotechnology in medicine and agriculture (insecticides), sensors, and nano catalytic composites is due to the very unique properties of nanoparticles, nano size, and high surface area ratio compared to metal ions. Metal nanoparticles have been used very widely in the field of chemistry, as special nanocatalysts in the field of organic synthesis, other unique properties can be used repeatedly and are very effective with a high level of accuracy so they are very efficient.Most of the transition metal nanoparticles such as palladium, nickel, gold, silver, and platinum have been studied and used for different catalytic applications. The catalytic activity of metal nanoparticles depends on their smaller size with a large surface area ratio and produces very good yields and very efficient reaction times. Palladium nanoparticles are very sensitive to many carbon-carbon coupling reactions such as the Mizoroki-Heck reaction [Kongor et al., 2016].The synthesis of the C-4-phenylcalix[4]resorcinarene-nanopalladium compound can be synthesized via several reaction routes in succession: One of the reaction steps for the synthesis of palladium nanoparticles is the reduction process of palladium (II) to palladium[0] in the presence of phenylhydrazine. Several researchers related to the formation of etherification reactions and continued the complexation route between palladium (II) cations and calix[4]resorcinarene derivatives [Busroni et al., 2022]. Nanoparticles are widely used as catalysts, antibacterial, and antioxidants, as well as anticancer. The nanoparticle structure is composed of metal, non-metal (organic), or mixed atoms. The nanoparticles are hydrophobic and the surface of the nanoparticles is often coated with a polymer to stabilize the metal. Chemical synthesis of metal nanoparticles was carried out by forming metal atoms from the reduction of metal precursors using chemical reducing agents, such as NaBH₄, HCOOH, PANI, and PPy. The formed metal atoms will experience nucleation followed by growth which will produce nanoparticles. Nucleation can occur because supersaturated solutions are thermodynamically unstable. Metal nanoparticles have a solid three-dimensional structure. These particles are made by reducing metal ions into zero-valent and uncharged metals. The reaction process for the formation of nanoparticles by means of charged metal ions such as Au, Pt, Ag, Pd, Co, and Fe is reduced with reducing agents such as sodium citrate, sodium borohydride, hydrazine, polyaniline, and polypyrrole[Patel et al., 2014]. The absorption of ES-PANI peaks at 3600–3000 cm⁻¹ and 3000–2800 cm⁻¹ according to the –N H and –CH PANI stretching vibrations respectively. Bands due to aromatic stretching of CN vibrations appear at 1294 cm⁻¹, while the absorption peaks at 1594 and 1490 cm⁻¹ represent the Quinoid (Q) and Benzenoid (B) structure of the emeraldine salt phase from PANI, however, a comparison of the FT-IR spectra of the samples exposed to unexposed nanocomposites revealed two significant differences.[Athawale et al., 2006]

Material and Methods:-

Material:-

Synthesis Material of ES-PANI@PdNPs; according to Shillin Chen et all., 2020, Ethanol, PdCl₂ (Merck), FeCl₃ 5H₂O, Aniline, Chloroform Merck, Acetone Merck

Instrumentation

The instruments used in this study consist of laboratory glassware, heating, and magnetic stirring analytical scales; Buchii evaporators (R-124),spectrophotometry infrared (FTIR), and UV-Vis.(GENESYS 10S UV-VIS)

Methods:-

Synthesis of ES-PANI@PdNPsnanocomposites *in situ*

Preparation of ES-PANI@PdNPs nanocomposite was prepared using the redox method (*in situ*), 20 mg PdCl₂ mixed with 15 mL aniline solution in (ethanol:chloroform =25:25).. The mixture was stirred magnetically for 1 hour at room temperature where a homogeneous solution was obtained. Then a solution of FeCl₃ (5 g FeCl₃ in 25 mL of ethanol) was added dropwise with constant stirring and refluxed for 48 hours at 50°C, where a brown-black precipitate was obtained. The precipitate was allowed to settle overnight, filtered, and dried at 50°C. for 24 hours

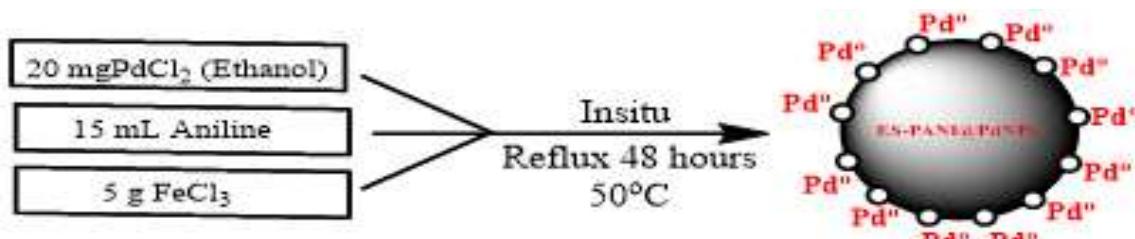

Figure 1:- Scheme representation depicting the preparation of ES-PANI@PdNPs.

Route Mechanism Polymerization of ES-PANI@PdNPs :

Route I. Polymerization of polyaniline :

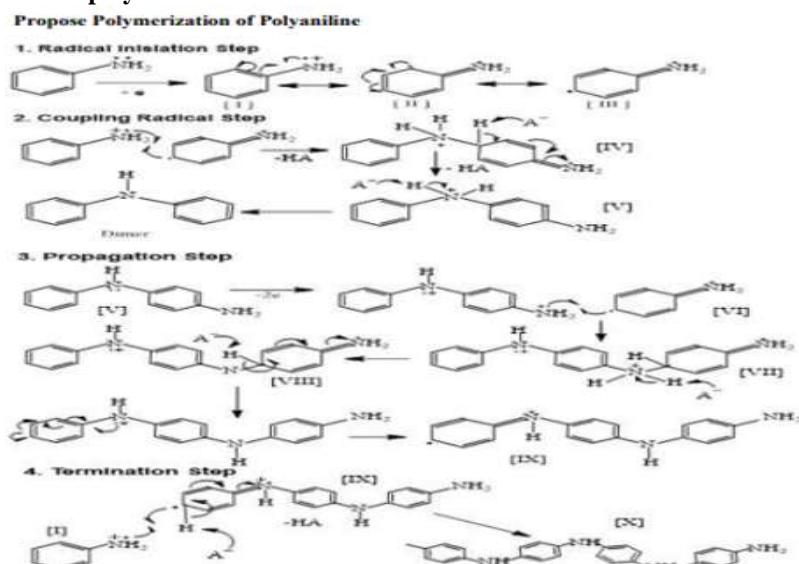

Figure 2:- Proposed Mechanism Polymerization of Polyanilines [Busroni, et al., 2022].

Route II: Synthesis Novel of ES-PANI@PdNPs Nanocomposites (in-situ)

In Figure 5, below ES-PANI@PdNPs absorption due to aromatic stretching of the absorption peaks at 1577,69 and 1494,14 cm⁻¹ represent the Quinoid (Q) and Benzenoid (B) structures of the emeraldine salt phase of ES-PANI@PdNPs. However, a comparison of the FT-IR spectra of the samples exposed to the unexposed nanocomposite and the exposed nanocomposite indicated that there were two significant differences from 1577,69 cm⁻¹ thus causing an effective reduction effect. in the presence of PdNPs or palladium nanoparticles by converting imine nitrogen into amines, namely a benzene-like structure formed during positive interactions. The reaction is shown in Figure 3 and Figure 4. This is a representative model of the ES-PANI@PdNPs nanocomposite material in the form of a blackish-brown solid identical to Figure 3 below.

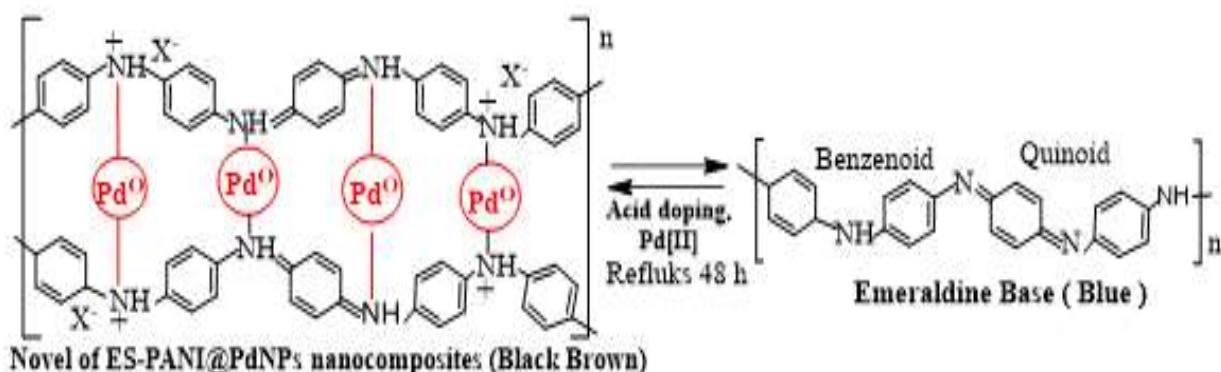

Figure 3:- Proposed Structure Novel of ES-PANI@PdNPsnanocomposites.

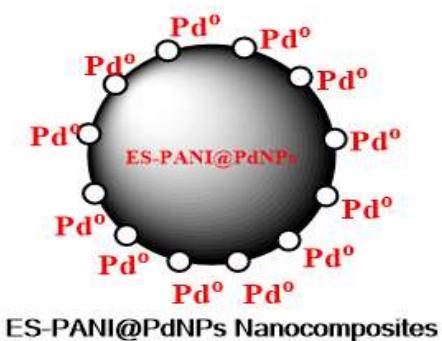

Figure 4:- Proven of Novel of ES-PANI@PdNPs nanocomposites.

Result and Discussion:-

Material of ES-PANI@PdNPs nanocomposite concept to enhance the catalytic reduction of Cr(VI). Base on Figures 3 and 4. illustrates the concept of synthesis of ES-PANI@PdNPs. The nanocomposite was prepared in two steps: a simple hydrothermal process to synthesize ES-PANI@PdNPs nanocomposite and an in-situ reduction method using ES-PANI@PdNPs without external reducing agents.

Investigating of ES-PANI@PdNPs Nanocomposite

Investigating of ES-PANI@PdNPs Nanocomposites Using FT-IR

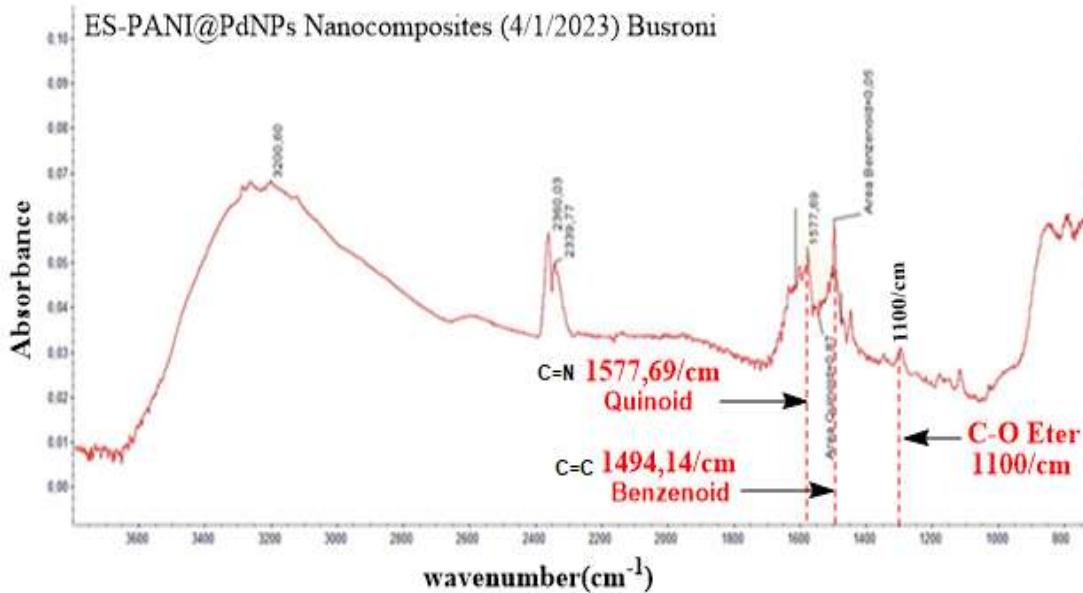

Figure 5:- Spectra FTIR of ES-PANI@PdNPs Nanocomposites.

In Figure 5, the FT-IR spectrum, the anti-prostate, and cancer MCF-7 compound is a complex of [Pd(en)(8HQ)]NO₃, according to the results of research by [Wulandari et al., 2021], that palladium ions can form a complex compound with ethylenediamine in complex of [Pd(en)(8HQ)]NO₃. The results of investigations with FTIR obtained absorption peaks at 1110, 2920, 3020, and 3414 cm⁻¹ associated with absorption peaks C=O ether, C-H aromatic, C-H aliphatic, N-H amines, and absorption peaks at 1500 and 1600 cm⁻¹ are related to C=C aromatic, and C=N imine. In this research, and the investigations of the complex of ES-PANI@PdNPs nanocomposites obtained absorption broad peaks at 3200-3400; 1577.69; 1494.14 cm⁻¹ related to absorption peaks N-H, C=N imine (Quinoid), C=C aromatic (Benzoid) respectively. Meanwhile, the results of the ES-PANI@PdNPs nanocomposites [Mazzeu et al., 2016]

Investigating of ES-PANI@PdNPs Nanocomposites Using UV-Vis

Investigating using UV-vis spectroscopy to track the occurrence of changes in Pd(II) to Pd(0), based on the results of this study that the novel material of ES-PANI@PdNPs nanocomposites was used by the research group to

synthesize palladium nanoparticles. To this knowledge, no one has reported the use of ES-PANI@PdNPs nanocomposites as reducing agents and stabilizers to synthesize nanoparticles, in particular, PdNPs or palladium nanoparticles. Herein have prepared PdNPs using palladium chloride and ES-PANI insitu in waters without the use of reducing agents or external stabilizers. Investigating using UV-Vis spectroscopy found absorption at 312 nm in Figure 6, indicating that there has been a reduction process of Pd(II) ions to Pd(0) zero valence, and the absorption at 450 nm has been lost in Figure 7, due to the presence of the C=N imine (Quinoid), and amine groups in the ES-PANI@PdNPs nanocomposites compound. Thus, dispersible inwater. ES-PANI@PdNPs nanocomposites are formed by chemical reduction with the reflux method. The morphology of the formed nanoparticles was analyzed by UV-Vis spectroscopy in Figure 6, and Figure 7, below:

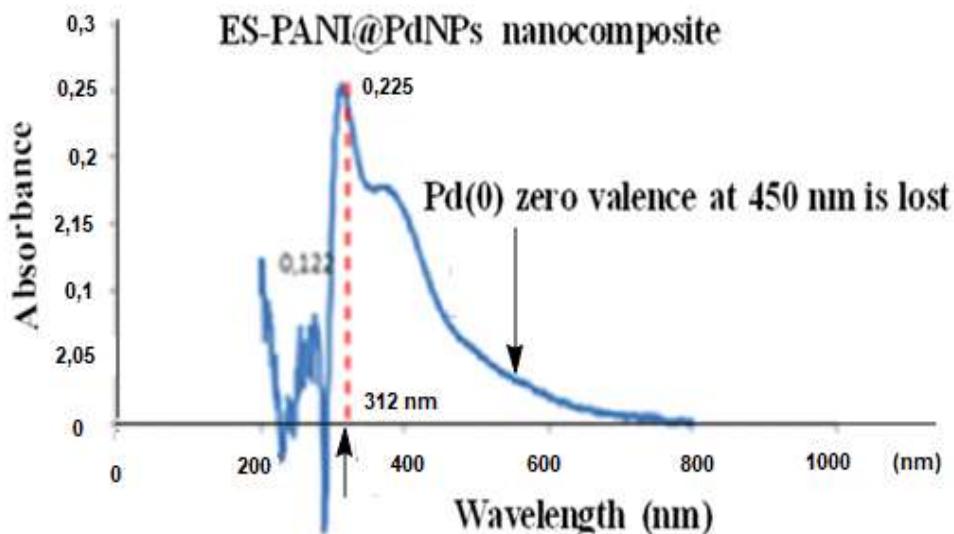

Figure 6:- Spectra UV-Vis analysis of ES-PANI@PdNPs,

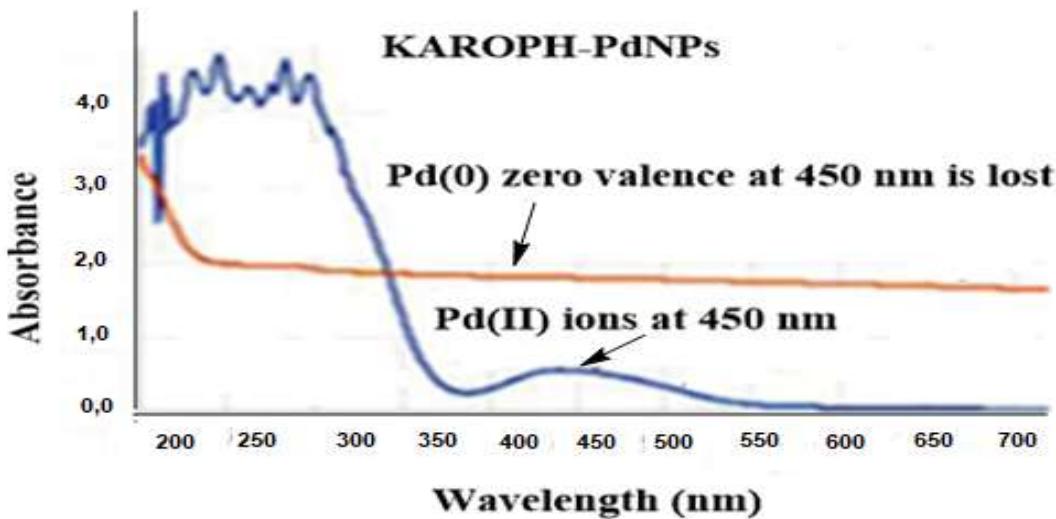

Figure 7:- Spectra UV-Vis analysis of KAROPH-PdNPs(Busroni et al., 2022).

Based on the UV-Vis analysis of the Pd(II) ion solution, the results of the analysis using UV-Vis obtained the maximum absorption at 450 nm and Pd(0) in the KAROPH-PdNPs material in Figure 7 the results of the analysis using UV-Vis obtained absorption at 200-250 nm, meaning that there had been a reduction process by the hydrazine group and absorption at 450 nm had disappeared[Busroni et al., 2022; Boeva et al., 2014], while for the composite material on ES-PANI@PdNPsnanocomposites, Figure 6 the results of the analysis used UV-Vis obtained the maximum absorption at 312 nm, meaning that there had been lost. The addition of palladium chloride solution to the ES-PANI solution insitu and heated to 500C showed a color change from yellow to dark brown. After one hour the

previously confirmed formation of the ES-PANI@PdNPs nanocomposites suspension. The UV-vis spectrum was taken to monitor and verify the formed ES-PANI@PdNPs nanocomposites. Palladium chloride solution gives a broad maximum absorption band around 400-600 nm which refers to the presence of Pd(II). The loss of the band at 450 nm in Figure 6 according to the results of UV-Vis analysis in Figure 8[Busroni et al., 2022; Boeva et al., 2014; Dhaoui et al., 2010 and Omole et al., 2017] was found due to the reduction of Pd(II) to Pd(0) the oxidation state confirmed the formation of PdNPs changes absorption around 312 nm as Pd(0) in Figure 6. Then the presence was compared based on the research results[Panchal et al., 2018; Patel et al., 2014; and Torshizi et al., 2016], and an aqueous solution of PdCl₂.5H₂O was added to the same volume of hot water solution of PdCl₂.5H₂O. The resulting mixture was kept under vigorous stirring and heated at 800C for 6 hours. The reduction for palladium was confirmed by a color change from yellow to blackish brown, meaning that there was a change in absorption of Pd(II) to Pd(0). There had been a change in absorption from 400 nm to around 260 nm confirmed using UV-Vis spectroscopy as ES-PANI@PdNPs nanocomposite insoluble in water and reduced Pd(0) zero valence in ES-PANI@PdNPs nanocomposite. Thus the results of ES-PANI@PdNPs nanocomposites. UV-Vis spectroscopy was mainly used to evaluate the formation of ES-PANI@PdNPs nanocomposites and the different color changes from yellow to blackish brown confirming the formation of Emeraldine Salt-PANI@PdNPs or ES-PANI@PdNPs materials. nanocomposite in Figure 6, according to the research results of [Kongor et al., 2016; Kebiche et al., 2020, and Torshizi et al., 2016]. Based on the research results [Kebiche et al., 2020], it was reported that the UV-Vis spectrum of the synthesized PdNPs nanoparticles was recorded on a spectrophotometer in the wavelength range of 200–600 nm showing the UV-Vis spectrum of the untreated reaction mixture containing absorption Pd(II) ions at the peak of 465 nm observed in the spectrum representing the absorption to Pd(II) ions. On the other hand, a strong maximum absorption appeared at 324 nm, indicating that a reduction of Pd(II) ions by polyaniline had occurred and the formation of palladium nanoparticles had occurred. The absence of a peak corresponding to Pd(II) ions in the sol nanoparticles indicates that the conversion has occurred completely from Pd(II) ions to the zero valent Pd form, a color change from yellow to black has occurred. Analysis using the UV-Vis spectrum of PANI in basic form is dominated by two absorption bands, one at 330 nm (LB), fixed on the benzenoid ring, and the other on the visible band. The region, 630 nm (IQ), is linked to the quinoid ring.[Mazzeu et al., 2016] and the UV-Vis of the Pd-PANI nanocomposite spectrum, show the presence of two peaks in each sample (reflux and irradiation), one observed at 411 nm and 393 nm, and a broad peak at 560 nm respectively corresponding to the pernigraniline phase. However, the presence of Pd nanoparticles is indistinguishable in the nanocomposites as the peaks for the Pd nanoparticles were found to overlap with the polymer.[Athawale et al., 2003, Kebiche et al., 2020].

Conclusion:-

It has been confirmed that Emeraldine-Salt-PANI can reduce Pd(II) ions to Pd(0) zero valence. The success of ES-PANI can be reduced internally, because the composition of ES-PANI can be reduced internally, because the composition of ES-PANI has groups that act as reducing agents, namely the C=N imine (Quinoid) group and the N-H amine group can form complexes with metal cations. ES-PANI's success in reducing Pd(II) ions to Pd(0) has been proven by the results of investigations using UV-Vis and FTIR. The results of the investigation with UV-Vis showed that there was a maximum absorption for palladium zero valence at 312 nm and absorption of palladium ions at 450 nm had disappeared while investigations with FTIR obtained the presence of C=N imine (Quinoid) groups and N-H amine groups. Both of these groups have an important role as reducing groups for metal cations, in research they can reduce Pd(II) ions to Pd(0) zero valence.
