Indonesian Journal of Chemistry

Vol. 9, No. 3, November, 2009

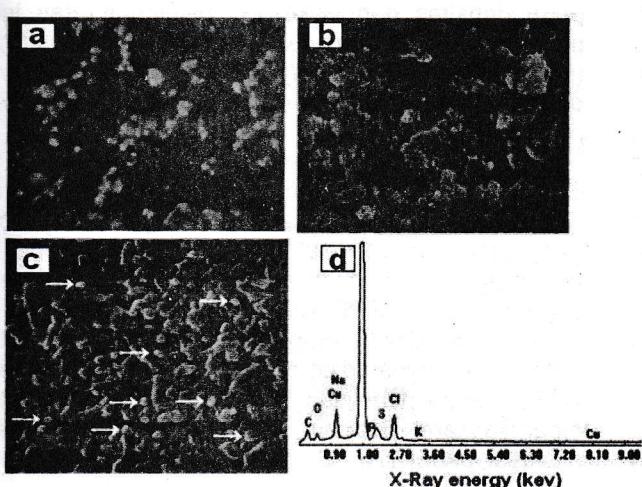

CONTENTS

| | |
|--|---------|
| Synthesis and Characterization of HDPE Plastic Film for Herbicide Container using Fly Ash Class F as Filler (Sintesis dan Karakterisasi Film Plastik HDPE Pengemas Herbisida Menggunakan Filler Abu Layang Kelas F) by Yatim Lailun Ni'mah, Lukman Atmaja, and Hendro Juwono | 348-354 |
| Synthesis of Copper Oxide Nano Particles by using <i>Phormidium cyanobacterium</i> by Abdul Rahman, Amri Ismail, Desi Jumbianti, Stella Magdalena, and Hanggara Sudrajat | 355-360 |
| Preparation, Characterization, Activity, Deactivation, and Regeneration Tests of CoO-MoO/ZnO and CoO-MoO/ZnO-Activated Zeolite Catalysts for the Hydrogen Production from Fusel Oil (Preparasi, Karakterisasi, Uji Aktivitas, Deaktivasi, dan Regenerasi Katalis CoO-MoO/ZnO dan CoO-MoO/ZnO-ZAA untuk Produksi Hidrogen dari Minyak Fusel) by Wega Trisunaryanti and Ignatius Emmanuel | 361-368 |
| Chitosan Preparation with Multistage Deacetylation of Chitin and Investigation of Its Physicochemical Properties (Preparasi Kitosan Melalui Deasetilasi Kitin Secara Bertahap dan Sifat Fisikokimianya) by Ahmad Budi Junaidi, Indriana Kartini, and Bambang Rusdiarso | 369-372 |
| Adsorption of Gibberelic Acid onto Natural Kaolin from Tatakan, South Kalimantan (Adsorpsi Asam Giberelin pada Kaolin Alam asal Tatakan, Kalimantan Selatan) by Sunardi, Yateman Arryanto, and Sutarno | 373-379 |
| Pillarization of Layered Tetratitanates Anion by Zirconium(IV) Polycation Species (Pilarisasi Layer Anion Tetratitanat oleh Spesies Polikation Zirkonium(IV)) by Hari Sutrisno and Endang Dwi Siswani | 380-385 |
| Nitrogen, Water and Benzene Adsorption in Mesoporous Carbon (CMK-1) and Commercial Activated Carbon (Norit SX22) by Paulina Taba | 386-390 |
| Stability of Ketoprofen Coated by Chitosan-Guar Gum Gel (Stabilitas Ketoprofen Tersalut Gel Kitosan-Gom Guar) by Purwantiningsih Sugita, Bambang Srijanto, Budi Arifin, and Ellin Vina Setyowati | 391-397 |
| Ferroelectric Properties of BaBi₄Ti₄O₁₅ Doped with Pb²⁺, Al³⁺, Ga³⁺, In³⁺, Ta⁵⁺ Aurivillius Phases by Afifah Rosyidah, Djulia Onggo, Khairurrijal, and Ismunandar | 398-403 |
| The Performance of Chitosan-Ferrihidryte Membrane for Phosphate Uptake by Barlah Rumhayati, Chasan Bisri, and Wahyu O. Fajarina | 404-409 |
| Prevention of Protein Adsorption on Bare Fused-Silica Capillary by PEG in Capillary Zone Electrophoresis by Adhitasari Suratman and Hermann Waetzig | 410-413 |
| Lead Acid Battery Modeling for Electric Car Power Sources (Pemodelan Baterai Asam (Lead Acid Battery) Sebagai Sumber Energi Mobil Listrik) by Bambang Sri Kaloko | 414-419 |
| Methyl Mercury Production in Natural-Collected Sediment with Different Geochemical Parameters (Produksi Metil Merkuri dalam Sedimen Alami dengan Parameter Geokimia yang Berbeda) by Markus T. Lasut, Hardin F. Rares, and Yoshiaki Yasuda | 420-424 |
| Yogyakarta Air Borne Quality Based on the Lead Particulate Concentration (Kualitas Udara Kota Yogyakarta Ditinjau dari Kadar Partikulat Timah Hitam (Pb)) by Zaenal Abidin and Sunardi | 425-431 |
| Theoretical Study of the [Fe(en)₂(NCS)₂] Complex with Reparameterized Density Functionals by Yusthinus T. Male, Djulia Onggo, Muhamad A. Martoprawiro, and Ismunandar | 432-436 |
| The Adsorption of Pb(II) and Cr(III) by Polypropylcalix[4]arene Polymer (Adsorpsi Pb(II) dan Cr(III) oleh Polimer Polipropilkaliks[4]arena) by Suryadi Budi Utomo, Jumina, and Tutik Dwi Wahyuningsih | 437-444 |
| Synthesis of Surfactants Dilauroyl Maltose through Acetylation Reaction of Maltose Followed by Transesterification Reaction with Methyl Laurate (Sintesis Surfaktan Dilauroil Maltosa Melalui Reaksi Asetilasi Terhadap Maltosa yang Diikuti Reaksi Transesterifikasi dengan Metil Laurat) by Daniel | 445-451 |

CONTENTS (Continued)

| | | |
|---------|--|---------|
| 48-354 | Extraction, Clean-Up, and HPLC Detection of Carbaryl and Carbofuran from Cabbage (<i>Brassica oleracea</i>) by Iip Izul Falah | 452-456 |
| 55-360 | Antioxidant Activity of Methyl Gallate Isolated from the Leaves of <i>Toona sureni</i> by M.Taufik Ekaprasada, Hazli Nurdin, Sanusi Ibrahim, and Dachriyanus | 457-460 |
| 361-368 | Aphorpine Alkaloids from Bark of <i>Cryptocarya ferrea</i> by Nurdin Saidi, A. Hamid A. Hadi, Khalijah Awang, and Mat Ropi Mukhtar | 461-465 |
| 369-372 | Anti Diabetic Flavanone Compound from the Leaves of <i>Artocarpus communis</i> by Puspa D.N. Lotulung, Sofa Fajriah, Andini Sundowo, and Euis Filaila | 466-469 |
| 373-379 | Phytochemical Studies of the Petroleum Ether Extract of the Leaves of <i>Lagerstroemia speciosa Linn</i> by S. M. Mizanur Rahman, Shayla Pervin, Md. Abdul Quader, and M. Amzad Hossain | 470-473 |
| 380-385 | Esterification of Fatty Acid from Palm Oil Waste (<i>Sludge Oil</i>) by Using Alum Catalyst (<i>Esterifikasi Asam Lemak dari Limbah Kelapa Sawit (Sludge Oil) Menggunakan Katalis Tawas</i>) by Thamrin Usman, Lucy Ariany, Winda Rahmalia, and Romi Advant | 474-478 |
| 386-390 | The Poriferasta Compound-5,22E,25-trien-3- β -ol from <i>Clerodendrum paniculatum</i> Leaf as Inducer Agent of Systemic Resistance on Red Chilli Plant <i>Capsicum annuum L</i> from Cucumber Mosaic Virus (CMV) (Senyawa Poriferasta-5,22E,25-trien-3- β -ol dari Daun <i>Clerodendrum paniculatum</i> sebagai Agen Penginduksi Ketahanan Sistemik pada Tanaman Cabai Merah <i>Capsicum annuum L</i> terhadap Cucumber Mosaic Virus (CMV)) by Weny Musa, Hersanti, Achmad Zainuddin, and Roekmiati Tjokronegoro | 479-486 |
| 391-397 | The Applicability of the Crystal Structure of <i>Termotoga maritima</i> 4- α -Glucanotransferase as the Template for Sulochrin as α -Glucosidase Inhibitors by Rizna Triana Dewi, Yulia Anita, Enade Perdana Istiyastono, Akhmad Darmawan, and Muhamad Hanafi | 487-490 |
| 398-403 | Fragmentation Studies of $\Delta^{6,7}$ -Anhydroeritromisin-A by Liquid Chromatography-Mass Spectroscopy (LC-MS) ($\Delta^{6,7}$ -Anhydroeritromisin-A Sebagai Metabolit Baru Dalam Fermentasi <i>Saccharopolyspora erythraea</i> ATCC 11635) by Khairan, Umar A. Jenie, and Retno S. Sudibyo | 491-499 |
| 404-409 | Screening of Thermophilic Microorganism from Ijen Crater Banyuwangi as Phytase Enzyme Producer (Screening Mikroorganisme Termofilik Penghasil Enzim Fitase yang Tumbuh Di Kawah Ijen Banyuwangi) by Aline Puspita Kusumadjaja, Tutuk Budiati, Ni Nyoman Tri Puspaningsih, and Sajidan | 500-504 |
| 410-413 | Mataranine A and B: A New Diastomeric Indole Alkaloid from <i>Alstonia scholaris</i> R.Br. of Lombok Island by Surya Hadi | 505-508 |
| 420-424 | | |
| 425-431 | | |

Aims and Scope

Indonesian Journal of Chemistry is an international journal covering all aspects of Chemistry, including Chemical Education and Chemical Engineering. The journal publishes original research papers, short communications, and review articles. The paper published in this journal implies that the work described has not been, and will not be published elsewhere, except in abstract, as part of a lecture, review or academic thesis.

Indonesian Journal of Chemistry (ISSN 1411-9420) is published by the Department of Chemistry, Faculty of Mathematics and Natural Sciences, Gadjah Mada University, Sekip Utara, Yogyakarta, Indonesia. All orders accompanied by payment should be sent directly to The Department of Chemistry, Gadjah Mada University. Annual subscription rate: Rp 125.000,00 (including postages paid). Customers may make payments by transfer on BNI 46 Gadjah Mada University Filial (Emie Kurniawati, SH cq IJC, Account Nr. 0150173640, SWIFT code: BNINIDJAXXX).

LEAD ACID BATTERY MODELING FOR ELECTRIC CAR POWER SOURCES

Pemodelan Baterai Asam (Lead Acid Battery) Sebagai Sumber Energi Mobil Listrik

Bambang Sri Kaloko

Department of Electrical Engineering, Jember University, Jl. Slamet Riyadi 62 Jember

Received March 13, 2009; Accepted October 12, 2009

ABSTRACT

Successful commercialization of electric vehicles will require a confluence of technology, market, economic, and political factors that transform EVs into an attractive choice for consumers. The characteristics of the traction battery will play a critical role in this transformation. The relationship between battery characteristics such as power, capacity and efficiency, and EV customer satisfaction are discussed based on real world experience. A general problem, however, is that electrical energy can hardly be stored. In general, the storage of electrical energy requires its conversion into another form of energy. Electrical energy is typically obtained through conversion of chemical energy stored in devices such as batteries. In batteries the energy of chemical compounds acts as storage medium, and during discharge, a chemical process occurs that generates energy which can be drawn from the battery in form of an electric current at a certain voltage. A computer simulation is developed to examine overall battery design with the MATLAB/Simulink. Battery modelling with this program have error level less than 5%.

Keywords: Electrochemistry, lead acid battery, stored energy

PENDAHULUAN

Mobil dengan bahan bakar minyak (BBM) berkembang seiring dengan rendahnya harga minyak dunia saat itu sehingga kebutuhan BBM untuk mobil semakin lama semakin meningkat. Sementara itu cadangan energi bahan bakar minyak (BBM) kian menipis [1-2]. Mobil yang digerakkan dengan mesin bakar (*internal combustion engine/ICE*) akan menghasilkan emisi gas buang yang berpotensi menimbulkan polusi udara sebagaimana disampaikan oleh *Environmental Protection Agency (EPA)*. Gas buang yang dihasilkan oleh mobil dengan mesin bakar terdiri dari 18% partikel padat, 27% merupakan campuran bahan mudah menguap (terdiri 28% Pb, 32% NO dan 62% CO) serta CO₂ sebanyak 25% [3]. Polusi udara berdampak pada lingkungan [4] dan kesehatan manusia [5].

Penghematan bahan bakar minyak pada sektor transportasi serta isu *global warming* mendorong perlunya dikembangkan alat transportasi yang hemat BBM dan ramah lingkungan. Dari permasalahan ini perlu dicari sumber energi alternatif sebagai sumber energi yang digunakan untuk menggerakkan mobil serta teknologi penggerak mobil yang tidak menggunakan motor bakar. Salah satu upaya untuk mengurangi ketergantungan pada BBM dan mengurangi polusi lingkungan hidup adalah membuat mobil listrik.

Mobil listrik umumnya mendapatkan sumber energi listrik dari baterai. Baterai tersebut adalah suatu sel elektrokimia yang terdiri dari empat komponen dasar

yaitu elektroda positif, elektroda negatif, larutan elektrolit, dan separator/pemisah yang berfungsi sebagai isolasi antara elektroda positif dan negatif. Reaksi kimia antara elektroda dengan larutan elektrolit akan menghasilkan potensial listrik. Beda potensial listrik antara elektroda positif dengan elektroda negatif akan menghasilkan tegangan sel baterai. Besarnya tegangan sel baterai ini ditentukan oleh jenis elektroda dan konsentrasi larutan elektrolit. Sedangkan kapasitas baterai adalah banyaknya muatan listrik yang dapat diperoleh dari suatu baterai yang nilainya tergantung pada banyaknya bahan aktif yang ada [6].

Baterai elektrokimia mempunyai arti penting dalam sistem energi listrik sebab mereka memberi makna dalam menyimpan energi dengan cara seketika. Sebagian dari penggunaan utama baterai yang tumbuh cepat berlangsung dalam dekade terakhir adalah sebagai sumber energi utama pada mobil listrik. Ada banyak jenis baterai yang sekarang ini digunakan atau dikembangkan untuk pemakaian praktis, yang semakin tersebar luas pemakaiannya adalah baterai asam Pb [7-10].

Prinsip dari baterai pada umumnya adalah memanfaatkan reaksi elektrokimia [6,11]. Suatu logam yang bersentuhan dengan suatu larutan yang mengandung ion menyebabkan aktivitas ion dalam fase logam dan dalam fase larutan akan berbeda, perbedaan ini akan menimbulkan gaya dorong untuk hilangnya atau diperolehnya Zn⁺² oleh logam itu (gambar 1). Logam melepaskan Zn⁺² ke dalam larutan,
